

Science Enrichment

STEM is important for young children as it teaches them about the world around them. Science sparks kid's minds, showing them that they too can learn to problem solve. In this science enrichment class the children will conduct a different "experiment" each day, ranging from baking soda and vinegar volcanos, to balloon cars.

Miss Jamie is an aftercare assistant two days a week. Through taking Child Development classes for three years at Watchung Hills Regional High School, Jamie has had a lot of practice conducting science "experiments" with preschoolers. She is super excited to engage your children in scientific activities as she believes STEM is an important part of preschoolers' lives.

The most important thing is for your child to have lots of fun!
